Better than a Repipe...without Destroying Walls!

Pipe Restoration

COCA-COLA PRODUCTION FACILITIES
Abilene, TX and Rochester, NY

ACE DuraFlo[®] cures failing drain pipes

THE PROBLEM:

ACE DuraFlo[®] has completed in-place drain line installations in factories, casinos, restaurants and businesses that could not afford the expense of shutting down their operations. One case in point is Coca-Cola factories that are in full production, all of the time. The syrups used in the manufacturing of their product are extremely corrosive to cast iron drain lines.

THE SOLUTION:

ACE DuraFlo[®]'s cured in-place pipe restoration. ACE DuraFlo[®] rehabilitated the drains without shutting down the operations at these facilities. ACE DuraFlo[®] has developed resins that can withstand high temperatures and corrosive environments such as those found in these drain lines. ACE DuraFlo[®] corporate provided additional support for its local installers that enabled sophisticated projects such as these to be completed on time and on budget. ACE DuraFlo[®]'s installations department works in the field every day testing products and providing solutions to our clients across North America.
