Better than a Repipe...without Destroying Walls!

Pipe Restoration

TEMPLE EMANU-EL
New York City, NY

ACE DuraFlo® restores leaky roof drain pipes

The facade of this historic Temple features an arch with symbols representing the twelve tribes of Israel, flanked by two lions resting on semi-engaged columns. At the top, the arch wraps around a magnificent wheel-shaped window which has a traditional Magen David (six-pointed star) embedded in the center. Three sets of beautiful bronze doors, which also bear symbols of the twelve tribes, serve as the entrance.

THE PROBLEM:

This historic property was built in 1929. The 2,500 seat Sanctuary with over 10,000 members is the choice for New York's finest families. The interior of the temple features 103' ceilings with marble wainscoting and massive columns. With leaking roof drains installed behind walls a traditional cut, patch and disruption of service was an unthinkable option.

THE SOLUTION:

ACE DuraFlo®'s cured in-place pipe restoration. ACE DuraFlo®'s lining solution proved to be the best alternative and was proved successful where other lining systems failed. The 12-story high roof drains running through the columns of the Synagogue with multiple bends and reinstatements were seamlessly repaired using ACE DuraFlo®'s in-place drain lining technology. Installed from the rooftop, ACE DuraFlo®'s lining specialists completed the job in 5 days.
